Problem

Conflict between required smoke walls and a desired large open plan space that allows a continual flow of occupants

Solution

Two (2) continuous Fiberseal automatic smoke containment screens, that measured 11 metres wide x 3.5 metres high, were installed to prevent smoke spread across the large openings.

Design Considerations

Fiberseal is the only smoke containment system that can be provided locally and in a single module that spans in excess of 6 metres wide. It also has known performance data based on smoke leakage testing AS/NZS1530 Part 7.

Client

Auckland University

Fire Safety Engineer

Sinclair Knight Merz (Auckland)

*Note: Each project is unique and usually requires the involvement of a Fire Safety Engineer.
Please contact us to discuss the suitability of this solution for your project.*
